

Imagine no more excess luggage, no more freight expenses, no more dome ports, no more image plane curvature, no more chromatic aberrations, no more fuzzy corners, no more gears, no more port extensions, no more corrosion, no more scratches, no more condensation, no more overheating, no more flooding, no more breakdowns, no more expensive rigging, no more production delays, no more cumbersome lens changes, no more vignetting, no more lens alignment, no more focus calibration, no more reflections in the port, no more flies trapped between the lens and the port, no more forgotten lens caps.... the most advanced underwater camera system: the all-titanium Vanquish™. Unlike others, it can be easily mounted on a pole, ROV or hand-held in the surf zone and handled with ease.

The Vanquish™ is fully modular, upgradable and at just 4.5kg (10 lbs) it is by far the smallest and most capable cinema camera housing. It features precision-machined construction, image quality and reliability that no other underwater housing can match.

This Valentine's Day we believe that true Love is forever. So we decided to offer a Lifetime Warranty on the World's smallest, sharpest and smartest cinema camera housing ever made: the Vanquish™ for RED DSMC2.

This offer is ends on 14th February 2019.
